

SPORTS SPEED DISPLAY

The Unipar Sports Speed Display has been developed specifically by Unipar for sporting & promotional applications.

With over 25 years in field of sports speed detection the system uses our latest speed detection software capable of registering anything from a football to a racing car.

The speeds are displayed on 270mm ultra-bright LED numerals down to tenths of a MPH/KPH. Housed in a slim impact resistant polycarbonate housing the numerals are clearly seen even on the brightest day. Should the weather take a turn for the worst no need to worry, the unit is waterproof.

Supplied with its own carry case complete with stand and rechargeable power pack the unit will give at least 10 hours continuous operation between charges.

UNIPAR SERVICES
www.uniparservices.com

Setting up takes only minutes and once in place will continue to work completely automatically. Now featuring a handy 'clip anywhere' radar head allowing remote positioning away from the main display if desired.

Used widely by football clubs for promotional events and sports development for junior and senior players alike. The system is also fast becoming popular with Rugby clubs where accuracy and speed of pass is essential.

The displays have also been widely used for corporate companies such as Coca Cola, Sky Sports the BBC and even used by the Guinness Book of Records to verify speed related record attempts.
